EDUCATION

Toronto Metropolitan University

Bachelor of Science in Computer Science (Co-op)

Sep. 2024 – Apr. 2028

Toronto, Ontario

EXPERIENCE

Business Intelligence Developer (Co-op) | C#, SQL, JavaScript

Ontario Shores Centre for Mental Health Sciences

Jun. 2026 – Sep. 2026

Whitby, Ontario

- Co-developed a full-stack web application using **C#**, **.NET**, and **Blazor components**, creating a secure interface for physicians to input and process critical patient data
- Created and updated **SQL scripts**, **stored procedures**, and **data pipelines** to automate backend updates and keep data flowing smoothly
- Optimized data access by rewriting inefficient **SQL queries** to improve page load times and overall application performance
- Designed and built **relational data marts** from scratch, using **SQL** to transform raw tables into structured formats for reporting

Coding Instructor | Python

STEM Camp

Jun. 2024 – Sep. 2024

Newmarket, Ontario

- Led hands-on learning sessions focused on coding and robotics, fostering student engagement and technical understanding
- Guided students through practical applications of loops, conditionals, and variables in Python, with practical exercises
- Mentored students in debugging and problem-solving, fostering critical thinking and coding proficiency

TECHNICAL SKILLS

Languages: SQL, C#, Python, Java, C, HTML/CSS, JavaScript

Frameworks/Cloud: .NET, Blazor, React, Node.js, AWS, Azure Datafactory, Azure DevOps, Pytest, REST APIs, FastAPI, JSwing

Developer Tools & Libraries: Linux, Git, Power BI, Visual Studio Code, Visual Studio, pandas, NumPy, Excel

PROJECTS

Rubik's Cube Solver | Python, HTML, CSS, JavaScript, FastAPI

- Implemented a layer-by-layer solving system (**CFOP-style**), including **F2L**, **OLL**, and **PLL** case detection, capable of solving any valid scramble across **43 quintillion** possible configurations
- Engineered a comprehensive testing environment using **Pytest** framework, validating solver accuracy across CFOP stages, achieving 100% solve rate over 1,000+ randomized trial scrambles while enforcing a strict move-count efficiency threshold.
- Developed a **REST API** using **FastAPI** to expose solver logic as HTTP endpoints, enabling communication between the Python backend and JavaScript frontend
- Built an interactive web demo featuring real-time **3D cube visualization** and step-by-step solution animation

IMDB Data Insights & Movie Recommender | Python, Streamlit

- Developed a **Python-based** platform that recommends movies and TV shows based on user-selected titles, genres, and popularity metrics, processing around **~ 1 million IMDB titles**
- Implemented **sorting and filtering** functionality to list content by rating, number of votes, and release year, enabling dynamic exploration of popular titles
- Processed and analyzed **IMDb datasets** using **pandas** and **NumPy** to handle large-scale data efficiently and generate accurate recommendations

Gengar Simulator | Java

- Designed a turn-based simulation game based on the video game "Pokemon"
- Applied **linear algebra** concepts (**points**, **matrices**) to control **animation** paths and drawing logic
- Built an interactive **GUI** with **JSwing** for animations and to enhance user experience
